SUBHASHREE BEHERA

Full-Stack Developer | AI Integration | Next.js · React · Python · Gemini API

sweety22313@gmail.com | +91 7008088959 | India | GitHub | LinkedIn | Portfolio

SUMMARY

I build and deploy AI-integrated web apps using Next.js, React, Python, and the Gemini API. Recent work includes a 5-agent interview simulator and a Korean compliance portal with structured LLM output — both live and on GitHub. Also an open source contributor with 2 merged PRs. CS graduate (2026) actively looking for a job or internship in fullstack, frontend, or AI development.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, HTML5, CSS3, SQL, C++

Frontend: React.js, Next.js 15/16, Tailwind CSS, Framer Motion, shadcn/ui, Responsive Design

Backend: Node.js, FastAPI, Flask, REST APIs, Firebase Firestore, SQLite

AI & APIs: Gemini API (2.5 Flash / Flash Lite), OpenAI API, Google AI Studio, Prompt Engineering, Structured Output Enforcement, Multi-Agent Systems, AI Agents, Function Calling, Tool Use, Agent Memory & State, Long Context Optimization, Agent Security & Evaluation, Agent Observability, RAG (in progress)

Python: pandas, BeautifulSoup, Selenium, Playwright, Pydantic, requests, NumPy

Dev & Deployment: Git, GitHub, Vercel, Railway, Netlify, Firebase, Formspree, VS Code, Cursor, npm, pip

AI Dev Tools: Cursor, GitHub Copilot, V0.dev, Claude AI

Human Languages: English (Fluent) · Korean (Conversational — Hangul proficient)

PROJECTS

InterviewLens — AI Interview Simulator | *Next.js 15, Gemini 2.5 Flash Lite, Firebase Firestore, TypeScript, Vercel*
Live Demo | GitHub

- 5-agent pipeline — Research, Interviewer, Evaluator, Round Summary, and Final Verdict agents, each with a narrow, focused job — simulating a full company-specific hiring process end-to-end
- Candidate memory compounds across sessions via Firestore, so returning users get progressively more personalized evaluation instead of starting from zero; resume-aware via Gemini multimodal PDF parsing
- Exponential backoff retries and layered fallbacks so a failed AI call never crashes the session; submitted to Google Gen AI Academy APAC Meet the Builders, built solo end-to-end in TypeScript

K-Trust — Korean Market Compliance Portal | *Next.js 15, TypeScript, FastAPI, Gemini 2.5 Flash, Pydantic, Firebase, Vercel, Railway*
Live Demo | GitHub

- AI system that audits South Korean merchants and returns trust scores, legal status, and public sentiment — all as typed, structured JSON enforced via Pydantic + Gemini response_schema (no defensive parsing needed)
- Split architecture: Next.js on Vercel handles the frontend, FastAPI on Railway runs the backend, merchant data lookup is O(1) from a mock intelligence database
- Built the prompt rubrics to simulate scraped Korean court records, tax filings, and Naver/Kakao sentiment as unstructured LLM input

SweetyCodes — AI-Powered Developer Portfolio | *Next.js 15, TypeScript, Gemini API, Framer Motion, Tailwind CSS, Vercel*
Live Demo

- Portfolio with a Gemini chatbot trained on my resume — recruiters can ask it questions and get real answers, not canned responses
- EN/KR bilingual toggle with full Hangul localization across every UI component; animated character states (idle, dance, sleep) using Framer Motion; time-adaptive video backgrounds
- 98.8% TypeScript — this is the project I send first when applying anywhere

TaskFlow AI — SaaS Landing Page | *Next.js 16, TypeScript, Tailwind CSS, Formspree, Vercel*
Live Demo | GitHub

- Marketing landing page for an AI freelance workflow tool — animated marquee, bento grid features section, FAQ accordion, and a waitlist form that actually submits via Formspree
- Designed to convert: asymmetric hero layout, strong CTA hierarchy, mobile-first — the kind of page a startup would pay for

CarbonShine Detailing — Frontend Portfolio Project | *Next.js, TypeScript, Tailwind CSS, Formspree, Vercel*
Live Demo | GitHub

- Dark-mode business site for a car detailing studio concept — service showcase, lead capture form via Formspree, SEO-optimized structure, fully mobile responsive
- Built to demonstrate real-world client site skills: polished UI, working contact form, production deployment on Vercel

Paws & Play — E-Commerce Product Page | *Next.js 16, TypeScript, Tailwind CSS, Vercel*
Live Demo | GitHub

- Product landing page for a smart dog toy — image gallery, testimonials, FAQ, and a Buy Now flow with order confirmation; wired up to support Stripe/Razorpay when a real client needs it

VibeWeather — Bilingual Weather App | *HTML, CSS, JavaScript, OpenWeather API*
Live Demo | GitHub

- Live weather app with real-time EN/KR language switching — temperature, humidity, 5-day forecast from OpenWeather API; mobile-first, deployed on GitHub Pages
- Directly demonstrates Korean localization skills, relevant for Korean tech market roles

CarbonIQ — AI Carbon Footprint Tracker | *Next.js, TypeScript, Tailwind CSS, Firebase, Gemini 2.0 Flash, Recharts, Vercel*
Live Demo | GitHub

- Natural-language footprint logging — type "drove 45km, ate 1kg beef" or upload a bill photo; a single Gemini call extracts the activity and returns a CO2 estimate, a tip, and a relatable comparison
- Confidence-gated AI writes: low-confidence extractions are surfaced for user confirmation before touching Firestore, instead of silently logging bad data
- Personalized daily challenges generated from actual logged history, plus a live "Earth Debt" counter and a 10-year impact projection chart — built for PromptWars Virtual, Main Challenge 3

Open Source — PassiveRecon-Aggregator | *Python, Shodan API, Crt.sh, Concurrent Execution*
GitHub

- PR #13: proposed, designed, and built a full passive WHOIS lookup module (whois_recon.py) — concurrent execution, graceful error handling, ISO date serialization; reviewed and merged by maintainer
- PR #2: added execution time tracking across all recon modules

ACHIEVEMENTS

- **1st Place — Code Relay Hackathon (Team)** | Intercollege, Jan 2026
- Team coding relay against multiple colleges — won first place; wrote and debugged fast under pressure
- **1st Place — Solution Sprint Hackathon (Team)** | Intercollege, Jan 2026
- Designed and shipped a working technical solution within a strict time limit — first place
- **2nd Place — Bug Buster Hackathon (Individual)** | Intercollege, Jan 2026
- Solo bug-fixing competition; placed 2nd, faster than most competing teams
- **Keynote Speaker — Blockchain Seminar** | Khallikote University, 2023
- Gave a keynote on blockchain as a first-year student — the only fresher on the speaker list

EDUCATION

- **B.Sc. Computer Science** | Khallikote Unitary University, Odisha, India — 2022–2026 (Graduated)
- **Senior Secondary (XII)** | Kendriya Vidyalaya — 88%
- **Secondary (X)** | Kendriya Vidyalaya — 91.4%

CERTIFICATIONS

- HackerRank Python (Basic) — 2025
- Data Science and Artificial Intelligence — Korea National Open University (KMOOC), Oct 2025
- Full Stack Web Development — FreeCodeCamp + CS50W
- Git & GitHub Version Control — used daily across all projects

ADDITIONAL

- 2x open source contributor to PassiveRecon-Aggregator — both PRs merged by maintainer
- Preparing for TOPIK (Korean Language Proficiency Test)
- Write about projects and dev learnings on Velog
- Available immediately for remote internship or freelance work globally
